# Concrete Levelling Fast & Easy<sup>®</sup>

**One man can level an entire truck load of concrete in 10 minutes or less.**

**Reliable Robin / Subaru gasoline engine.**

Unique patented technology - horizontal vibration (NOT up and down) minimises water drawn to the surface and enables machine to be pushed forward as well as back without sinking into the concrete!

Libby is appreciated by architects and Construction Supervisors because it gives any casting a high modulus of elasticity, contributing synergistically to reinforcing rods to achieve maximum structural strength.

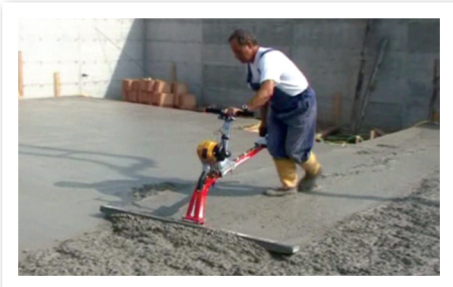

Libby produces a high level of finish: if used when casting a roof or floor, you no longer have to lay a screed to assure good adhesion of tar linings or waterproofing products applied by brush or roller. Based on the size of the surface, this saves you a great deal in materials and labour, and lets you rapidly amortise the machine. Libby has ergonomic grips with an exclusive "anti-shock" system that allows the operator work continuously without tiring and without damage to his hands from vibration.

Libby is used all over the world by thousands of contractors with a huge satisfaction rating.
